News from the Joker:

More and more Jokers for the perfect hand

Wuppertal. The Joker spanner family is already entering its jaw-dropping 11th year. Who would have thought in 2012 that wrenches could be reinvented? It all started in 2012 with the Joker 6000, whose metal plate in the mouth solved several screwdriving problems at once. The Joker range now includes over 100 items, and Wera's product developers keep coming up with something new.

And the new ideas stop at nothing: Not only are the tools themselves constantly evolving, but the accessories also get what's coming to them.

Now new in spring 2023 is a clip which makes it super easy to store the sets in the tool bag. Usually, wrenches sets are quite bulky.

That's about to change. The clip is made of wear-free material, perfect for everyone who often uses different wrench sizes. Removing the correct spanner is effortless, yet doesn't affect its secure hold in the clip.

Also new: A double open-ended wrench that incorporates the advantages of the Joker 6003: The combination of the 7.5° pivoted mouths and the double hexagon geometry doubles the placement points. A repeated 180° turn of the wrench around the longitudinal axis during screwdriving provides four placement possibilities, and bolts or screw heads can be engaged every 15°. This is half of the common return angles on the market.

Under the designation 6005, Joker double open-ended wrenches are now entering the field, each with two mouths based on the 6003, and they are ready for powerful screwdriving deeds.
