

Wera, as one of the largest screwdriver bit manufacturers worldwide, is licensed to produce the most popular screw profiles, including TORQ-SET®, Tri-Wing®, TORX®, TORX PLUS®, Phillips etc. And, by working directly with leading airplane manufacturers, Wera brings value to its customers – by developing and delivering tailored and economical solutions which helps to reduce down time, to improve efficiency and safety and finally, to reduce cost and boost competitiveness.

Perhaps the best example of the innovative character of Wera, specifically related to the aerospace market, was the introduction of our patented TORQ-SET® MPlus screwdriver bits. The uniquely improved geometry of the MPlus bits provides for better fit in the screws,

higher torque transfer, and less cam-out. The strongest benefit, however, is seen during the removal of fasteners which have been in service, and are filled with paint or are damaged.

We are sure that you will find many more useful solutions to your daily fastening challenges in the following pages of our new Aviation MRO Catalog. And, if we can provide any technical assistance, or if you have particular challenges for which you can't currently find a solution, please contact your local Wera representative for support. Looking forward to receiving your challenges and becoming part of your solution!

Martin Strauch/CEO

In-house surface finishing – ecological and economical.

System Process Control ensures Wera quality, every time.
